FLAMECLUB®

Flameclub designs and manufactures a complete selection of exclusively designed lighter for any lifestyle. Flameclub offers lighters for the gift, housewares, outdoor, promotional, and tobacco markets. Flameclub takes pride in providing excellent customer service and absolutely high quality on all our products. Flameclub invites you to Enjoy Your Best Lighter!

SOFTFLAME or also called regular flame is the most common of all known flame types. It is generated by a piezo or flint wheel ignition. The optimum height of a softflame is approx. 3cm.

To pass the **HEAT TEST** lighters have to withstand 4 hours in a special oven at 65°C. Thereby they may not get any spills or leaks of gas.

A special patented friction wheel allows a child resistant ignition with flint lighters for protecting the safety of user.

The **ISO9994** is a world-wide valid norm which states the demands within the general product safety for lighters. It consists basically on three test methods (**HEAT TEST**, **DROP TEST**, **FLAME HEIGHT**) that a lighter has to pass before being placed on the market. **ISO9994** certification can be provided upon request.

TURBOFLAME The windproof burning behaviour is the mark of distinction of turbo flames. Above a nozzle the lighter gas is mixed with air, swirled inside the diffuser and ignited by an electrode. The mixture burns like a Bunsen burner with great heat, but without a visible flame. In general the same technique as used for the classic turbo flame. The only difference is the special magnesium wire that creates the interesting colorful flame.

The **DROP TEST** indicates the ability of the lighter to withstand safely a drop from 1.5 m in a group of concrete without spilling.

FLAMECLUB Lighters are produced in TÜV monitored factories. All the production must pass stringent certified and integrated quality management.

All FLAMECLUB packs carry the ISO9994 Norm required warning and safety pictograms clearly printed.

JETFLAME is probably the hottest flame available at present. Due to the fact that gas and air are swirled above a nozzle through a special burner type, the sharp and pointed flame is created. And such JETFLAME is normally use for cigars or other professional ways.

According to the outside temperature the **FLAME HEIGHT** of lighters varies in use. The maximum flame height may not exceed 10 cm.

A higher pressure on the push button ensures a child-resistant ignition with electronic lighters for protecting the safety of user.

All FLAMECLUB Cigarette Lighters sold within the EU are conform with child resistant standard EN 13869.

FIREBALL

Extinguish a burning car

Extinguish a burning taxi

Extinguish a burning shack or house

Extinguish a burning oil

Extinguish a burning bush

Ball will explode when in contact with fire

The Revolutionary Fire Extinguisher Simplest and Fastest Way to Extinguisher the Fire

Fire Extinguisher ball is a kind of shaped ball extinguisher. When simply thrown into the fire, it would activate within 3 seconds and effectively disperse extinguishing chemicals. When a fire occurs and no one is present, fire extinguisher ball will self-activate when it comes into contact with fire and give loud noise to warn the people nearby. Due to this feature, it can be placed in many fire prone areas, such as electrical circuit breakers, or kitchen, cars, hotels, bla...There is no special train or skill required to operate the ball and no need to face any dangers. No inspection and maintenance are required for the product life span for 5 years.

The fire fighting problems for traditional extinguishers

We have to recognize that 90% ordinary people don't know how to use the fire fighting equipment when they face the real fire situations. Have you ever been one of those people, who found themselves unable to use the fire extinguishers in real fire situation due to the following reasons?

Your lack training on proper effective use

Its bulky and heavy weight make it difficult to carry when it is some distance from the fire

You need to get close to the fire and exposed to the smoke and heat problems

Your panic when facing fire causing yourself to forget how to use the equipment

How to overcome the problems

The revolution of fire extinguishing ball offers you advantages that exceed the conventional methods.

1. Light Weight -- 1.3 Kilogram, shapes of a ball even the old and children can use it easily.
2. Easy Use --- Just throw it into the fire or install it in any fire risk areas.

Wide Application

Fire Extinguishing Ball can be placed on a shelf top, tabletop, along the hallway or any visible area of easy access. Fire Extinguishing Ball is best mounted in high risk areas such as kitchens, electrical circuit breakers, overloaded electrical outlets, or near fireplaces.

Safe to use --- No need to get close to the fire.
No-toxic to the environment. Fire Extinguishing Ball is made from human and environmental friendly materials.
The outward driving force from activation of the ball does not harm to human and environment

No need special maintenance ----- For a period of 5 years without maintenance required, always on guard for you with its unique capability to emit loud noise of less than 140dB as a fire alarm upon activation.

How to Use Fire Extinguishing Ball

(Active Use) Throwing Fire Extinguisher ball into the fire

When a fire erupts, take the nearest available fire extinguishing ball and simply throw into the fire. The ball will naturally fall into the base of the flames, where it is most needed, and activate within 3 seconds. No need to pull pins, or to get close to the fire. No special training or skills required.

(Passive Use) Self Activating Mount.

One of the great benefits of Fire Extinguishing Ball is the fact that it can self activate in the presence of fire when no-one is present. If positioned in the appropriate high-risk area where most fires are likely to start, it will self activate upon reaching the appropriate temperature and extinguish the fire.

B,C,E Class use of surveillance only.
Symbol of fire A, B, C, and E Class is conformity with EU Standards.

- A Class: Flammable material
- B Class: Liquid flammable material
- C Class: Gas burning combustible
- E Class: Electric equipment combustible gases

Techniques and Package

- Technical Parameter:**
- Weight of extinguishing powder mixture: 1.3 +/- 0.2 kg.
 - Total weight of the agent: 1.5 +/- 0.2 kg.
 - NEC: 4.0 g
 - Diameter: 147 mm
 - Warning audio signal: 120 dB (Impulsive Noise)
 - Activation time: 3 - 10 sec with flame
 - Effective extinguish area: 1.3kg-3 cubic meter

Package:
1 piece in color box-17.2*17.2*16.5cm
12pieces in Carton- 57*37*37.5cm
N.W/G.W: 16.8 / 18.00kg
