## INTRODUCTION & HISTORY

ESTABLISHED 1953 | VITTORINO MENEGHELLI  
RANGE OF BRUSHWARE PRODUCTS  
BIDVEST GROUP | WE STRIVE TO SATISFY

*Giving You a*  
**QUALITY START**  
*for a*  
**QUALITY FINISH**

Our company was founded in 1953 by an industrious Italian national, **Vittorino Meneghelli** who was seeking new challenges in South Africa to invest his personal knowledge in the brush trade, gained from a family business with history spanning several decades. Although being a qualified accountant, the results from being exposed so long to the family brush trade probably influenced his decision to attempt doing the same in his new surroundings and country.

He chose the name Academy Brushware for his newly founded business and as the logo he used the well known **“LION” with wings presiding as guard over the Doges palace next to the world famous St Mark’s Cathedral in Venice, Italy.**

From humble beginnings and with limited staff the business started growing and the production now needed to be marketed and administered in a professional manner. As the business became established and grew, more people were employed in handling the administrative, production and despatching responsibilities. Paint brush production became the main force of the business and an expansion program entailed the acquisition of brush-filling machines to satisfy the needs of moving into the domestic broom and affiliated brush territory. The challenges were ongoing and dictated that paint rollers be added to the existing range, now putting the company in a position to offer the complete range of brushware and allied products to the domestic market.

In the mid 1960's a mere 10 years after starting up the business, it had developed into a bustling organisation and dominated a large share of the domestic market. It was also a founding member of the local Brushmakers Association. A substantial range of its products were manufactured under SABS laid down specifications as determined and drawn up by the association. Newly designed products were continually introduced on a regular on-going basis and the already substantial range on offer continuously expanded. During the mid 1970's the Company was considered to rank amongst the top two brushmaking companies in the country. Always looking for new challenges, the company qualified and became an accredited user of the SABS - ISO 9001 Quality Standards business concept.

In 2002 the Management Team at Academy Brushware successfully concluded a management buyout of the company.

Boasting over 60 years of manufacturing flair, Academy Brushware was acquired by Bidvest in November 2013.

In July 2018 Sanlic House of Locks was incorporated into Academy Brushware. This division of our business distributes padlocks, keys, Safes & Security, Iron Mongery, Key Cutting & Accessories.

Academy Brushware is currently recognized as the top ranking brushmaking company in South Africa.

The company produces a range of products recognised for its high quality over many years of manufacture. Its dedication to provide an excellent service and outstanding customer relations in the supply of superior brushware places it at the forefront of this industry. This is being achieved by applying the most advanced production methods in conjunction with modern technology, state of the art machinery and a workforce dedicated in their purpose to deliver the best.

We manufacture a wide range of brooms, for domestic and industrial purposes, scrubs, shoe, bannister and affiliated domestic brushes, mops & rakes.

The company produces and distributes a complete range of painting utensils and tools, eg from the traditional flat type paint brush, block brushes, sash tools, lining fitches, etc to a very substantial paint roller range offering a wide choice of fabric application for various purposes.

We have introduced a range of aluminium ladders which include A-frame, Lean To, Fibreglass & Extension Ladders.

We also boast an industrial division where very exact and specific brushes are produced to satisfy the needs of the industry as a whole. These vary between hand made, wire drawn or of manual manufacture.

**No matter what the demands of the customer are, we strive to satisfy.**

## DID YOU KNOW?

Sandpaper is produced in a range of grit sizes and is used to remove material from surfaces, either to make them smoother (eg. painting & wood finishing) or to remove a layer of material (eg. old paint) or sometimes to make the surface rougher (eg. preparation for gluing)

40-60	COARSE	Stripping
80	MEDIUM	Levelling & Smoothing
100	FINE	Finishing

**DID YOU KNOW?**

A paintbrush is a brush used to apply paint or sometimes ink. A paintbrush is usually made by clamping the bristles to a handle with a ferrule. They are available in various sizes, shapes & materials.

Because acrylic paints, solvents, and even water can cause natural hair paintbrushes to lose their shape and degrade over time, many acrylic artists now prefer brushes made from synthetic fibre. Synthetic acrylic brushes cost less and are much easier to clean.

Oil paints are thick! When painting on a canvas, there is a need for brushes that can move the oil paint against the grip of the fabric fibres. Hog bristle brushes is best used. When subtlety or precision is needed, brushes with soft natural bristles or brushes from synthetic hair are used.
